REslag Market

Your tool to find slags all over Europe

Sign up now!

www.reslag-market.eu

REslag

Founded by the European Union's H2020
Programme Waste-1-2014. GA - 642067

REslag Objectives

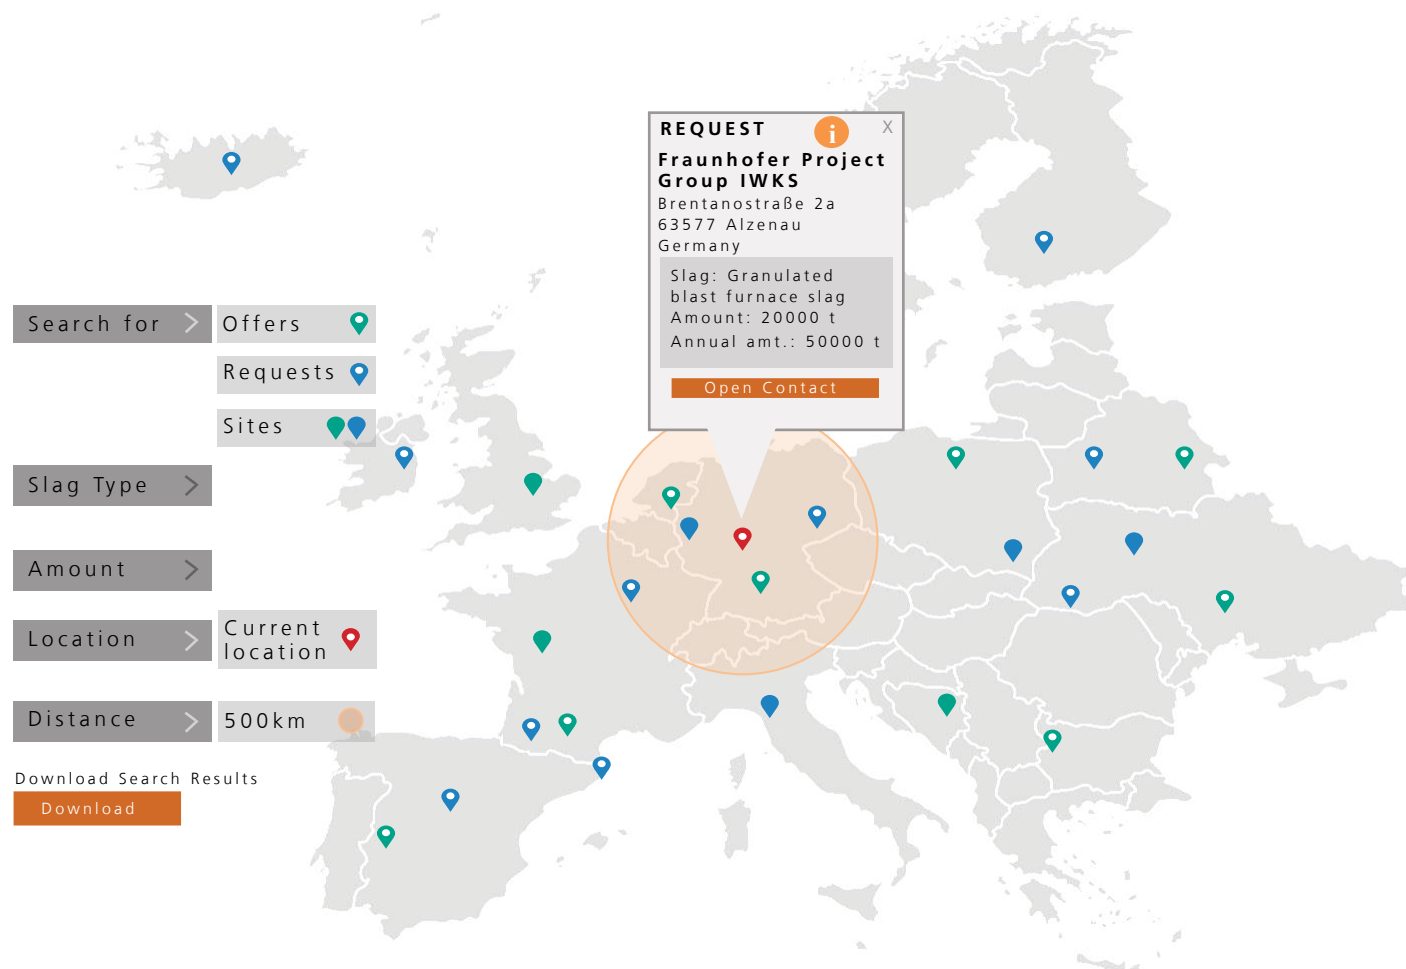

REslag's main objective is the implementation of an effective valorization of steel slag and its reuse as a feedstock for four innovative applications. The new technologies will be demonstrated by first line end-user industries on a technical pilot level.

These include the extraction of critical metals and the production of ceramics material from industrial slags. Further pilots are thermal energy storage systems reusing waste from the steel sector towards a cross-sectoral circular economy.

REslag Market

Our ICT tool maps waste streams from steel industries and provides offers to as well as requests from end users. It is a European waste traceability solution for the metal, energy-intensive, CSP and refractory industries.

Please visit: reslag-market.eu

- Create your own account and become part of the European slag community
- Search and browse through trade offers and requests of slag material across the EU
- Identify potential partners for collaboration

- Request and provide detailed information on the amount, type and location of the slag desired and offered
- Boost your visibility
- Optimize logistics, trade and production
